Subject: CO2 emissions

Mr Soura,

I was given your contact info by one of the staff. My name is John Shell and I work with a group developing new technologies for the uses of algae. We currently have several projects going in South Carolina. All we need for growing algae is CO2 and sunlight. We grow it and harvest it and produce bio-mass protein source for animal consumption, bio-crude, Omega3/6 oils and the uses are growing.

As we have proven the technology works we are looking at increasing our sources of CO2 supply. We have been looking at the problems the power industry is facing complying with the proposed new regulations by the EPA and we realize what a great opportunity this is, not only for the state of South Carolina but for the energy industry.

I know the Governor has appointed a board to look at solutions for this problem and I believe we have that solution.

If you could, I would like to speak with someone concerning this. Here is my contact information.

Thank you for your time.

Regards

John Shell
