Payment Trends

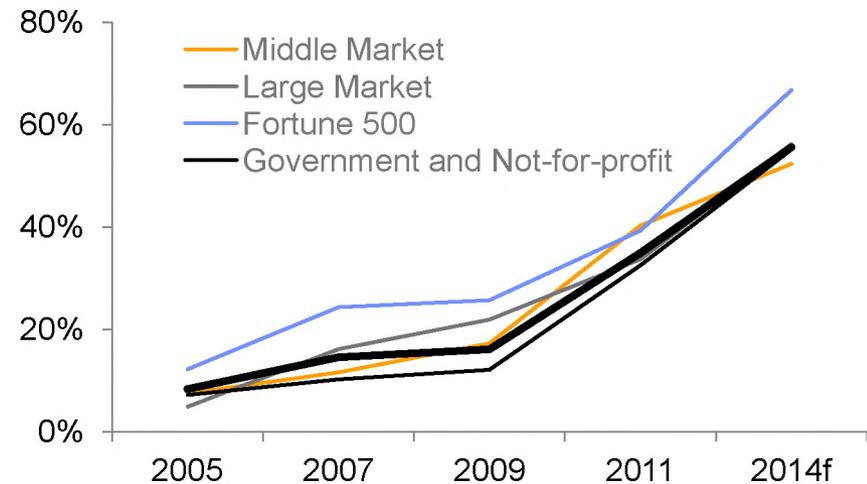

U.S. Growth Driven by Purchasing Cards

Commercial cards are expected to grow \$90B over the next 2 years with purchasing cards representing 87% of this jump. Virtual cards are the engine driving the P-card increase.

Source: 2013 US Commercial Card Update – Mercator Advisory Group

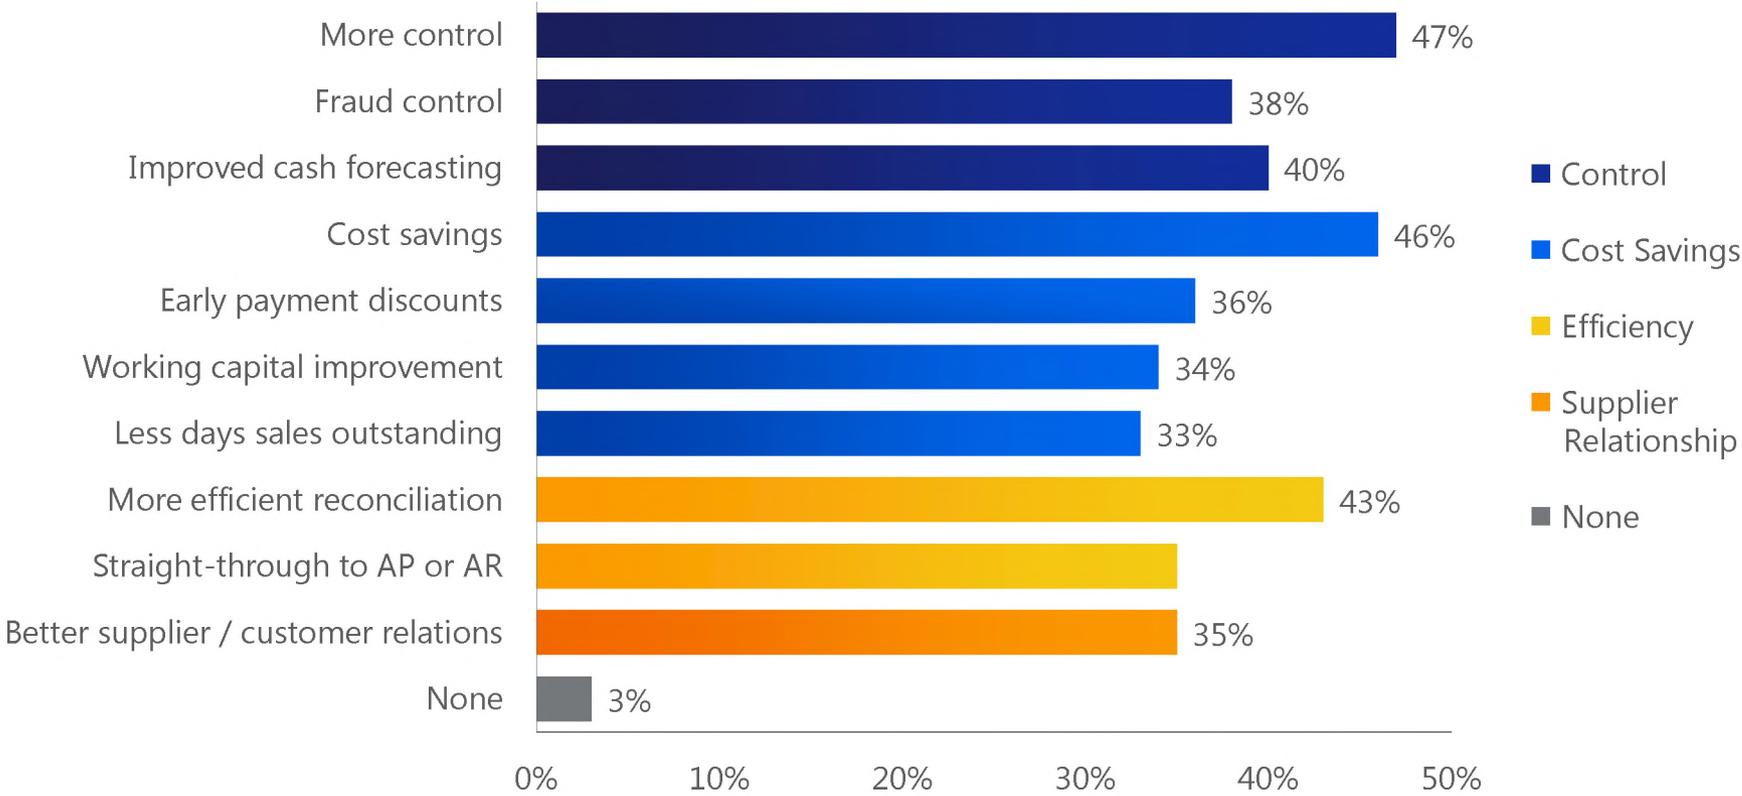

Percent of organizations using EAP¹ accounts

(1) EAP = Electronic Accounts Payable and represents virtual accounts of all flavors that run on card rails. Source: 2012 RPMG Electronic Accounts Payable Benchmark Survey Results; n=4,375 survey respondents.

Why Are Organizations Automating Payments?

Organizations can achieve benefits from automating P2P (e.g., improved control, efficiency, and supplier relationships)

For data on this page, at 90% confidence, a variance of 3% is needed to indicate a significant difference

Source: 2011 Visa Global Cash Management Survey: Q20. What value do you see a card-based accounts payable automation solution providing?

Sample: Mid and large companies

Fraud Awareness, Prevention and Mitigation

Fraud Landscape Today

Counterfeit fraud represents 70% of card-present fraud and grew 27% in 2014

EMV chip will significantly reduce card-present counterfeit fraud

Source: Visa Fraud Reporting System (FRS) and Enterprise Data Warehouse (EDW); CY 2014; U.S. Issued / U.S. Acquired

Fighting Fraud With Layers of Security

83% of fraud in the US

Counterfeit

Card Not Present

Lost and Stolen

ENCRYPTION

REAL-TIME PREDICTIVE ANALYTICS

Chip

- Creates a unique cryptogram for each transaction
- Not a silver bullet

Tokenization

- Tokens replaces account number with unique digital token
- If payment token is used as the account number, it will be identified as stolen and rejected

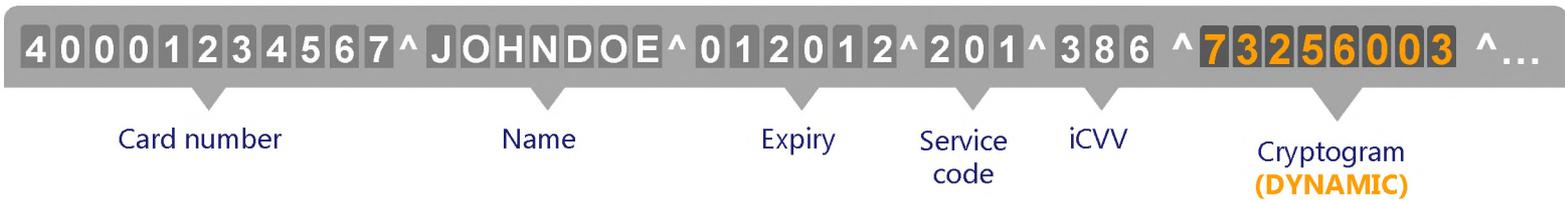

PIN

- Fraudster must know PIN for card to work at a point of sale
- Static data set

Source: Visa Fraud Reporting System (FRS) and Enterprise Data Warehouse (EDW); CY 2013; U.S. domestic Visa debit and credit

How does EMV chip technology work?

Because the cryptogram changes with every transaction, even if the card data is stolen, the information can't be used to create counterfeit cards because the cryptogram would have already "expired"

Tokenization

Mobile NFC + Tokenization

Key entered, Card
on File

- Token replaces static account numbers for use in specific domains
- Token may use EMV rails
 - EMV cryptography for card authentication and transaction security
 - NFC payment enabled

Card Not Present Tokenization

Key entered or Card
on File

- Token replaces static PAN for use in specific domains
- Enables refined risk management

U.S. EMV Migration – Client readiness report

Credit

- **141.9 million** EMV chip cards issued, **86.1 million of which are credit**
- The U.S. now has more chip cards than any other market in the world

Debit

- **55.7 million EMV debit cards issued**; a 21% increase from July to August
- **7% of ATMs** in the United States are capable of accepting chip transactions

U.S. EMV Chip Migration Forecast¹

Credit cards	70%
Debit cards	41%
Activated terminals	47%

By the End of 2015

Acquirers / Terminals

- A few hundred EMV terminals are now capable of routing PIN debit EMV transactions **using the common debit AID**
- Domestic EMV PV increased 65% from \$2.1B in July to \$3.4B in August

Merchants

- **301 thousand** EMV chip activated merchant locations, a **2% increase** from July to August
- Wave 2 of the merchant EMV survey shows upward trends in all areas. According to the study 95% of merchants are aware of chip technology today

Sources: Current cards based on MARS data through August 31, 2015; credit / debit card forecast per Aite Report – EMV: Lessons Learned and the U.S. Outlook (June 2014); activated terminal forecast per Payment Security Taskforce Acquirer projections press release (October 2014) ¹Forecast based on information currently available to Visa. Actual results may vary significantly.

White House Cybersecurity Event to Draw Top Tech, Wall Street Execs¹

Obama convenes top executives, including Bank of America, to help improve information sharing as breaches get more sophisticated.

Our response...

- ✓ Identify potentially compromised cards
- ✓ Prioritize and replace compromised cards as needed to reduce payment fraud risk
- ✓ Work closely with impacted clients to streamline the replacement process
- ✓ Replace cards with Chip & PIN enabled cards whenever possible
- ✓ Remain up-to-date with industry trends and best practices as the fraud landscape evolves

Typical data breach and fraud cycle

Common Causes of a Breach or Compromise

There are the three basic types of data security breaches that can lead to a data compromise:

Physical breach – theft of documents or equipment

Electronic breach – electronic breach of a system or network environment

Skimming – capture of card magnetic stripe data using an external device

Causes:

- Not changing the vendor-supplied password upon installation
- Trivial and common passwords for POS systems
- Outdated antivirus software definitions
- Phishing
- Use of vulnerable or non-compliant software
- Remote access to systems by third-party providers
- Not using 2 factor remote access
- Firewalls not properly configured

The Costs of a Data Compromise are High

- **Financial impact:** You may be subject to significant fines and losses arising from such fraud and from not properly protecting card account information
 - Potential for significant monetary losses related to a data compromise:
 - Card organization fines and assessments passed through to you
 - Fraud experienced on compromised cards
 - Other reimbursements for fraud losses
 - Forensics, card replacement, PCI non-compliant fines, etc.

- **Reputational impact:** Potentially more damaging than the financial impacts, public trust and confidence in your organization can be negatively impacted by this type of data security breach

Authorizations that need to be

- Outbound call to primary contact listed on account to verify activity
- If no answer, outbound call to secondary contact listed on the account
- If no answer at either telephone numbers or phone attempts can not be made, email sent to primary contacts to ask for a return call

Posted fraud charges that require an account

- Following fraud confirmation, the account will be closed and each transaction transferred to new account
- All transactions will appear on the new account number billing statement or your reporting tool
- Fraud will send a fraud statement to the Program Administrator or cardholder via email, fax or regular mail
- Program Administrator or cardholder may be asked to complete Fraud Affidavit to comply with VISA and MasterCard regulations
- Credits for individual fraud transactions will appear on new account for balance reconciliation
- Once the credit is applied to the account, the claim is resolved

Client action

Call the Fraud department at 866-500-8262 or collect 509-353-6656. The department is available 24/7 to assist with questions or verification.

Fraudsters are increasingly targeting clients that conduct online business, employing sophisticated tools designed to compromise your system and surrender control of your computer.

DOCUMENT an action plan now

Develop a sound internal process for transactions using the highest industry standards. Communicate and enforce the plan across the organization.

Create a separate plan to respond to an information compromise event. Keep in mind that an information breach may impact treasury activities.

EDUCATE your team on best practices

Establish other communication channels such as telephone calls, to verify significant transactions.

Do not use the "reply" option to respond to an email with transaction activity or approvals for payments.

TAKE ACTION

To understand actions you can take to help your dealership reduce the risks associated with fraud, review [online security tips and best practices](#) to get started today.

Bank experts and industry leaders share trends, tools and tactics for all business segments through video vignettes, case studies, podcasts, and featured white papers.

Chip & PIN / EMV

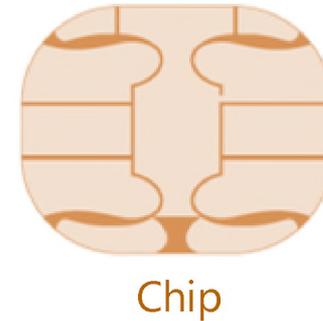

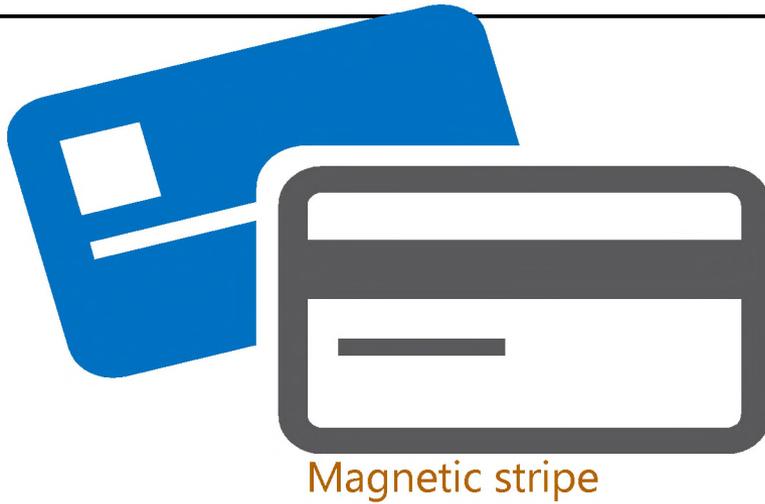

Bank
Merrill

What is EMV chip technology?

- Chip Technology allows data to be stored and processed in a microchip
- A chip has 3 key functions that help to create a more secure payment solution:
 - Data storage
 - Cardholder identification and authentication
 - Cryptographic processing
- EMV (Europay, MasterCard and Visa) is the global standard that defines how the chip card and terminal communicate

Magnetic stripe vs. chip technology

- **Magnetic stripe technology:** the technology acts as a passive carrier of card data, which is read and used by terminals, according to the rules programmed into the merchant device.
 - The data is static and the card is passive in the transaction
 - Issue: while U.S. fraud rates are statistically low, static data can be more easily captured by fraudsters and then used in fraudulent transactions without being detected
- **Chip Technology:** a card with a chip can be configured to make authorization decisions, based on scenarios. For example low dollar, low risk transactions can be completed offline to increase acceptance
 - Security: chip transactions are uniquely encrypted 100% of the time

-
- US has 23% of card transactions, and over 47% of fraud, and growing
 - Industry forecast is for slightly less than half of terminals EMV-enabled by Oct., 2015
 - How card usage will work:
 - No chip card - use mag stripe like we do now
 - Chip card, but no chip terminal – use mag stripe like we do now
 - Chip card and chip terminal – use chip function with PIN
 - Chip terminals may be present, but not functional in short-term
 - Chip & PIN / Chip & Signature
 - PIN environment:
 - PIN mailers sent out separate from mailing of cards
 - Cardholders must know PIN number
 - PIN check website
 - PIN numbers currently cannot be changed – looking to a potential future enhancement to allow this
 - Clients being converted in waves
 - Natural reissue / forced reissue
 - Impact with logos, custom cards, and line characters

Online PIN Check Cardholder Quick Reference Guide

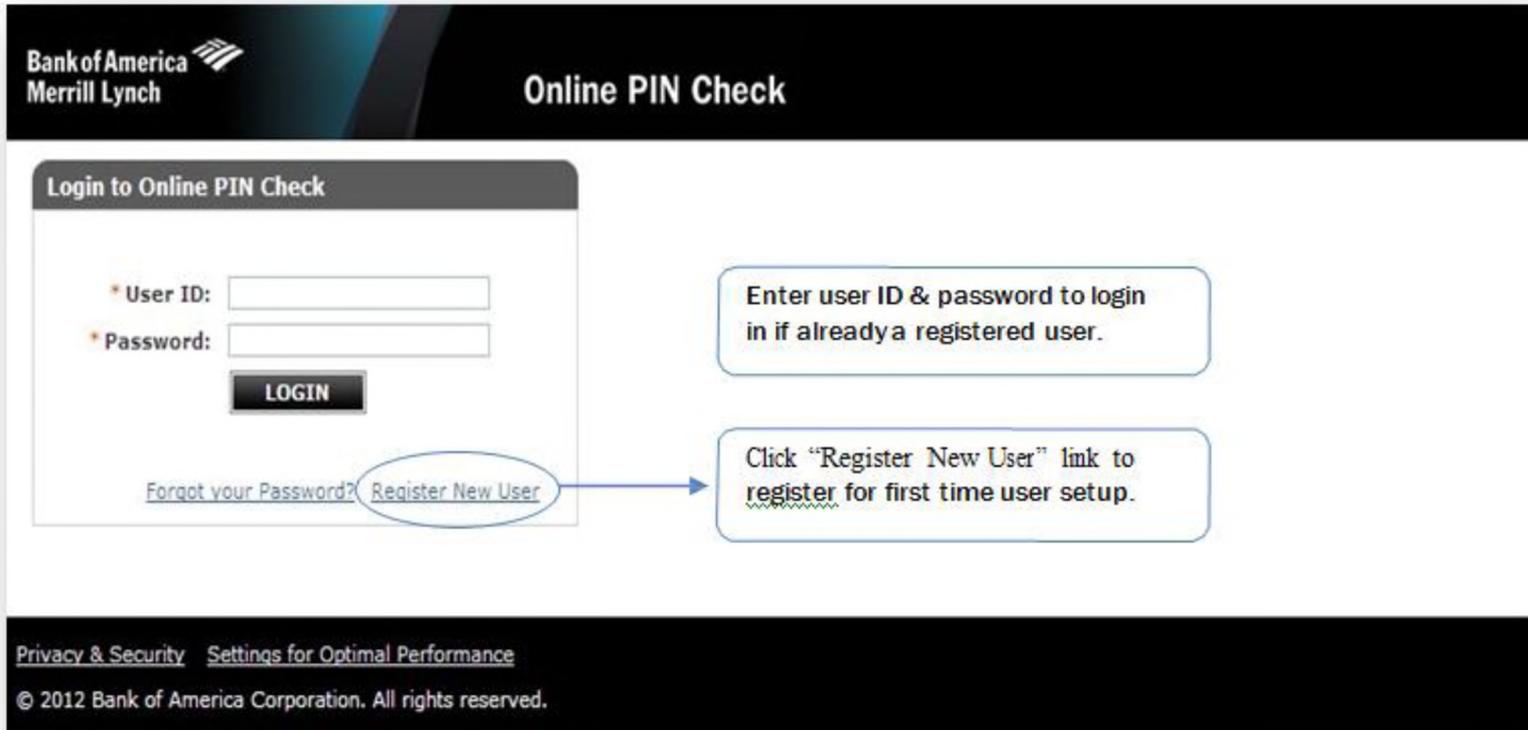

You're never without your PIN.

As you travel, you will find that Chip and PIN terminals are becoming more common and require the use of a Chip and PIN enabled card. To complete a purchase at these terminals, you will need to enter a PIN rather than provide a signature. The chip supplements the magnetic stripe on the card, providing you with greater access to points of sale and improved acceptance around the globe.

It is important that you remember your PIN and do not share with others. You can retrieve a forgotten PIN online at any time by visiting www.baml.com/PINCheck after a one time registration. The instructions below will help you get started.

Cardholder Login Page

The screenshot shows the 'Online PIN Check' login page. At the top left is the Bank of America Merrill Lynch logo. The main heading is 'Online PIN Check'. Below this is a 'Login to Online PIN Check' form with two input fields: 'User ID:' and 'Password:'. A 'LOGIN' button is positioned below the password field. At the bottom of the form are two links: 'Forgot your Password?' and 'Register New User'. The 'Register New User' link is circled in blue, with an arrow pointing to a callout box. Another callout box is positioned above the first one. The footer contains links for 'Privacy & Security' and 'Settings for Optimal Performance', and a copyright notice for 2012 Bank of America Corporation.

Cardholder Fulfilment Rebrand

Overview

September 2015

Bank of America
Merrill Lynch

"Bank of America Merrill Lynch" is the marketing name for the global banking and global markets businesses of Bank of America Corporation. Lending, derivatives, and other commercial banking activities are performed globally by banking affiliates of Bank of America Corporation, including Bank of America, N.A., member FDIC. Securities, strategic advisory, and other investment banking activities are performed globally by investment banking affiliates of Bank of America Corporation ("Investment Banking Affiliates"), including, in the United States, Merrill Lynch, Pierce, Fenner & Smith Incorporated and Merrill Lynch Professional Clearing Corp., both of which are registered broker-dealers and members of SIPC, and, in other jurisdictions, by locally registered entities. Merrill Lynch, Pierce, Fenner & Smith Incorporated and Merrill Lynch Professional Clearing Corp. are registered as futures commission merchants with the CFTC and are members of the NFA. Investment products offered by Investment Banking Affiliates: Are Not FDIC Insured • May Lose Value • Are Not Bank Guaranteed. ©2015 Bank of America Corporation.

Overview

- The Bank of America Merrill Lynch Commercial Card organization is implementing exciting new changes to our U.S. Chip & PIN card fulfillment. Both changes are effective August 31, 2015 on a go-forward basis.

1. U.S. Chip Card Production

- All U.S. Chip & PIN cards are now produced at our internal production facility in the Dallas, TX area. This relocation provides a number of efficiencies, including the ability to send true overnight expedited cards when needed.
 - + Please note: all bulk card deliveries will now be sent via UPS rather than FedEx.

2. Rebranding Scope

- All cardholder materials have been rebranded, delivering an enhanced experience and global consistency.
 - + Card plastics and printed materials reflect updated branding.
 - + A newly-launched online Cardholder Reference Guide allows cardholders to obtain important program and contact information any time they need it by visiting www.baml.com/globalcardus.
 - + Given the ongoing conversion of the U.S. portfolio to Chip & PIN, magnetic stripe plastics and collateral will remain in their current branding.

Rebranded U.S. Chip & PIN Card Carrier

Chip & PIN Brochure: updates made to version currently in print

- We will continue to print and insert this brochure until the U.S. market matures from an EMV standpoint.
- Utilizes most current branding elements and provides more concise direction around Chip terminal usage and OPC registration.

Your Guide to
Chip and PIN Technology

Bank of America
Merrill Lynch

Using Your Chip & PIN Card

Step 1 - Insert your card face up in a chip enabled terminal. Leave the card in place while the transaction is processed.

Step 2 - Follow the prompts to complete your purchase. In most cases you'll be asked to enter your 4-digit PIN.

Step 3 - Remove your card from the terminal once your transaction is complete.

- Your Chip & PIN card also has a magnetic stripe and will continue to work at merchants that are not yet chip-enabled.
- There is no charge to online or phone transactions. Provide your card number and complete the purchase as you do currently.

Frequently asked questions

What if I enter my PIN incorrectly?
You have four consecutive attempts to enter your PIN correctly. After the fourth failed attempt, your Chip card will be blocked and you will need to contact Global Card Services for assistance.

What if I forget my PIN?
Your PIN may be accessed via the secure Online PIN Check website at bank.com/PINCheck.

What if I lose my Chip & PIN card?
Call Global Card Services at 888.449.2273 in the U.S. or 800.300.5284 in Canada. If you are outside the U.S. or Canada call collect at 1.602.379.8753.

Your Guide to Chip and PIN Technology

Welcome to Chip and PIN

Your Bank of America Merrill Lynch card is now Chip & PIN enabled. The embedded microchip provides enhanced fraud protection and increased global acceptance.

Important PIN information

Your Chip card is issued with a 4-digit PIN (Personal Identification Number) which may be necessary to complete a transaction with chip-enabled merchants. You may activate your PIN at any time by visiting the secure Online PIN Check website at bank.com/PINCheck.

- One-time registration is required using the following information:
 - Account Number
 - Name on Card (exactly as embossed)
 - Expiration Date
 - Security Code (CVV)
 - Verification ID
- Remember your PIN and keep it confidential. At this time, your PIN cannot be changed.
- If an email or website asks for your PIN, decline and report the inquiry by calling Global Card Services.
- If you have an existing PIN for cash access, the same PIN will be used for your Chip card transactions.

(Note: the PIN will not automatically grant cash access if your company policy does not allow it.)

**Bank of America
Merrill Lynch**
