Clean Energy Driving Economic Growth in States

Job gains. Declining electricity rates. Magnet for economic development. From east to west, a growing number of states are embracing the promise of a low-carbon economy, both by setting ambitious renewable energy goals and expanding programs that encourage energy efficiency. In the states of California, Colorado, Hawaii and Minnesota, the largest utilities are sourcing 20 to 35 percent of their electricity from carbon-free wind, solar and other renewable source. Consumers are also saving billions of dollars on their energy bills because these programs are helping to trim electricity demand by as much as 1.5 percent every year.
