Subject: little help to IG

---

Josh & Christian, you both have been labeled as "the smart guys" by the IG, so we hope to lean on you for input as we decide on projects/reviews due to your unique global view. Even if you only give it a few seconds of thought, we will take it.

Potential Issue: 14 billion in revenues from "other funds" and federal government receives little external oversight/scrutiny, which increases risk of misapplication of funds direct to activities, functions, or projects of low utility outside of the general fund of the receiving agency. We have heard anecdotes re "other funds" revenue streams being diced up in a mathematical way, then disappearing into the ether.

1. What do you guys think of the risk?
2. Any ideas to test or areas of unusual high risk you have seen where we can sample?

We are hoping this rings a bell with you guys base on your work & you may have an idea on a cost/effective way to test or potential dig site to test risk?

Thanks in advance for your time.
