DID YOU KNOW? This unusual shaped wildflower can be found in forest throughout SC from Jan. - June. The common name, Jack in the Pulpit, is from the plant's hooded pulpit and the spadix "Jack" found inside. The actual flowers are located inside the "Jack" at the base of the spadix. When pollinated a cluster of bright red berries form from July –Aug. giving the plant one of its other common names "Jill-in-the Pulpit".

Linda Soulia Jack in the pulpit
