Improve MCI Outcomes

As the awareness of mass trauma incidences continues to increase, the need for tactical medicine continues to grow and evolve. Bound Tree understands how important it is to be prepared in these critical scenarios. From caregiver protection to hemorrhage control, the items below help improve quality of care, even in the toughest circumstances.

SAM® Chest Seal Overview

The SAM Chest Seal is a self-adherent occlusive dressing designed to treat open chest wounds. The seal is available with or without a one-way valve. Learn more about the benefits of the SAM Chest Seal.

How to practice the EMS response to an MCI

By Rom Duckworth

The multiple casualty incident (MCI) plan for EMS is only ever as strong as the weakest link. There are a lot of links in the chain, so it is critical that every member of the EMS organization develop skills to manage his/her role in a major incident.
