Subject: Anti Abortion Bill

---

Despite greater than a decade's worth of worldwide public health data that has shown that abortion bans do NOT reduce the number of abortions, they simply shift the balance from safe, legal abortions to less safe, illegal abortions, you are still pushing for bans? Why do so many conservatives ignore the public health data? Bans will save no fetuses and potentially cause harm or death to women who seek less safe, illegal abortions. Are you not aware of the very good public health data from all over the world confirming the ineffectiveness of bans? Why the anti-science stance? If you want to reduce abortions, support organizations like Planned Parenthood that provide affordable contraceptive meds. This is not rocket science...except maybe for the bible thumpers who opt for an ineffective, anti-intellectual approach...bans. I am anti-abortion but I favor methods proven effective to reduce them and everyone knows...should know. ..bans don't work.
