Ok. It's still an improvement and by SC's standards that's important!

From eyeballing it, the gap's only about 1%, it seems...but it's systematically in favor of the argument. Using the bars without the figures/percentages seemed to me to be more effective when I looked at it earlier. It's not much, but it's something.

Do you know the percentage of improvement?

The chart shows a slight improvement – which is still good – but I wonder if the percentage is better.

Sen. Matthews' line of questioning yesterday got me wondering...how do test scores compare in states with a constitutional requirement to elect the Superintendent vs. states where the Governor appoints and the Senate confirms the Superintendent?

I just ran the numbers...turns out they do better in all 4 major categories (4th and 8th grade reading and math) in states where the position is appointed.
