

Governor Nikky Haley. State House, Columbia, South Carolina 29201 December 15, 14
Regarding daily chemicals being sprayed in the atmosphere over South Carolina by the
U.S. Air Force presumably as some secret risky experimental function of the Pentagon.

What is known as chemtrails has become epidemic over the Carolinas and I must assume the entire nation. Please inquire of the federal government what they are spraying on us and certainly there's nothing healthy about this story of what is believed to be poisonous chemicals in the atmosphere even blocking the sun making it colder and denying farmers precious sunshine that makes their plants grow. Skies are being obscured by jumbo fog.

The mysterious fog streams in the skies has grown steadily worse and now these lingering massive chemical trails are settling down on our lakes and rivers mixing with the air we breathe at an alarming rate. Please demand answers from the federal government as to what the military air force is spraying on us. Saturday we were sprayed on all day but Sunday the skies were clear although Monday today there are massive clouds and total saturation of the skies with broad chemical trails. By late afternoon the wind had cleared the skies but then by nightfall the sun was shining reflecting gloomy on those dark trails already sprayed again overhead. When all these trails come together the sky becomes a smooth milky overcast. I cannot help but wonder if these aircraft are remote controlled.

Something simply must be done to stop this insanity enriching the corporate chemical industry at the expense of the innocent citizens of this country. NBC reported just today that 40 year-olds are now coming down with Alzheimer's (from aluminum particles?)

Most people are not looking up and do not understand the dangers of this contamination. It is as though they are trying to wipe out the human race. Please have this investigated and please demand answers from the federal government on behalf of the people of South Carolina. If you google Chem trails you will see a lot of postings that are warning of the dangers of spraying of these chemicals such as aluminum and others in the atmosphere.

Please find below a number of links from concerned citizens over this chem trail outrage. The federal government may dismiss it as jet vapors but those dissipate within seconds when the air temperature neutralizes. What we are facing here is a massive dumping of tons of poisonous chemicals in the atmosphere and I believe to enhance corporate profits.

Already we have had fluoride in our drinking water for 40 years which is a byproduct of aluminum manufacturing and is deadly poison under the auspices of protecting children's teeth when it has proven to damage children's teeth and recently the NBC affiliate here reported that it damages children's teeth and only recommended children to use less toothpaste. The population is getting this deadly chemical product even in the pharmaceutical industry like Prozac resulting in strange behavior of future America. Now we are getting it even in the air we breathe and I personally feel like sometimes I cannot breathe.

Thank you for your attention to this important health concern.

Sincerely-William Thompson 106 DuPont Drive. Greenville, South Carolina 29607

5 sites out of many on the Internet I find very interesting and poses the question we should be asking the government authorities even the president. This is the site exactly of what I'm seeing in our skies daily. Why are the meteorologist not seeing and showing it?
