This is the first of our 2016 national security webinar series highlighting how the ArcGIS platform supports locating illegal and hazardous drug farms in rural areas. Law enforcement staff have limited resources devoted to address this growing drug problem, and by utilizing GIS, they can use advanced predictive analytical tools to identify relevant geographic variables for determining potential drug farm locations. The results of this analysis can help direct patrol operations on the ground and surveillance operations in the air to increase the probability of a successful eradication operation.

After registering, you will receive a confirmation email containing information about joining the webinar.
