[Two-Generation Programs Linked to Improved Child Outcomes](#) -- The National Center for Children in Poverty released a report examining state and local policies and support programs that help young children and their parents.

[Transitional Care Associated with Lower Readmission Rates](#) -- A study published in Health Affairs examines the benefits of transitional care interventions, which help patients transfer from hospitals to home care.

[Summit Investigates How Technology can Aid Crime Victims](#) -- The RAND Corporation released a report highlighting findings from its 2014 Technology Summit for Victim Service Providers.

States Utilize Physician Assistant Workforce

The National Governors Association released a paper on how physician assistants (PAs) play a broad and expanding role in the health care system, working in a variety of practice areas and settings because of their adaptability and lower cost.

[The Role of Physician Assistants in Health Care Delivery](#) summarizes the role of PAs in the U.S. health care system and the barriers that may be preventing them from being used to the best of their ability. PAs deliver medical and surgical care in teams with physicians, who provide medical supervision and delegate tasks to the PA. State laws and regulations set the boundaries on scope of practice for PAs, which includes the types of services they can provide and the circumstances in which they are allowed to provide them. The paper also specifies policy considerations for state leaders interested in getting the most value from their physician assistant workforce.
