Subject: Intel's site in South Carolina

Hi Debbie & Andre:

We worked together when the Governor visited Intel in late 2013. You might have seen the news this week that Intel was announcing a restructuring initiative that will allow the company to intensify its investments in the products and technologies that fuel its growth, and drive more profitable mobile and PC businesses.

We expect that this initiative will result in the reduction of up to 12,000 positions globally. This will be achieved by voluntary and involuntary departures, global site consolidation, and efficiency initiatives. The majority of these actions will be communicated over the next 60 days.

Regrettably, the employees in Columbia were notified yesterday that their site will be closing. Given the work we did together, and the possibility that this news will attract local media attention, I wanted to reach out so that you heard it from us first. I will be your single point of contact if you or the Governor's staff have any questions.

I'm sorry to share this news, I very much enjoyed the work we did together in 2013.

Best regards,
Jonathan
