<<http://events.carahsoft.com/email-file/t/marketo-import-grey/dropShadow 5.gif>> **Modernizing Traditional IT and Accelerating New Application Delivery with Containerization**

“The possibilities posed by Linux containers, particularly at scale, have the potential to reinvent the entire landscape of enterprise IT, from how we build and consume applications to how we distribute and deliver resources and services.”
Ashesh Badani, VP and General Manager, OpenShift, Red Hat

Earlier this month, at Kubecon, Red Hat announced key enhancements to its comprehensive portfolio for developing and deploying enterprise-ready applications using Linux containers, OpenShift, and Atomic. Container based application development dramatically decreases application deployment times and allows for easier application management.

<<http://marketing.carahsoft.com/t/31122977/1251353470/69322974/0/40158/?2997ebdd=MTIIMkQ4JTJEMTUUmVhK0hhdCtDb250YWluZXIrTEM%3d&x=7cc5228e>> for a complimentary webcast to hear our speaker, Josh Ritenour, dive deeper into Red Hat’s updated offerings and containers, and how they can help your agency improve efficiency. This webcast will also cover:

- How containers compare to virtual machines

- Red Hat Enterprise Linux Atomic Host versus Standard Red Hat Enterprise Linux 7
- Atomic Enterprise Platform
- What's new in OpenShift 3.1

Interested but cannot attend at this time?
