Add remaining scoping items 3 through 6 to the current Palmetto Parkway Design/Build contract (File No. 2.140B). These scoping items include double lefts on US 25 at various intersections (item #3), widening of Clearwater Road from 3 to 5 lanes (item# 4), the ultimate interchange at I-20 and US 25 to include widening of US 25 to 6 through lanes (item #5), and the multi-use path adjacent to I-520 (item #6).

The South Carolina Transportation Infrastructure Bank Board approved \$18,062,923 at their November 27, 2007 meeting for these additional scoping items. Scoping items 3 through 6 were included in the Request for Proposals for the current design/build project, but were eliminated due to lack of funds.

By adding these scoping items to the current design/build contract, the Department can eliminate approximately \$4.5 million of rework associated with the current contract and save the public \$2.3 million in road user costs by completing this additional work 2.5 years early.

District Four Design/Build Bridge Replacement Project for Off-system Bridges

At the Commission Workshop on October 18, 2007, a three-year off-system bridge replacement list was approved that consisted of eighty-five bridges. In order to expedite the replacement of these bridges, we recommend that a portion of the bridges be constructed using the Design-Build method of contracting.

Forty-two out of the eighty-five bridges are located in District Four. The proposed Design-Build Project will be limited to that District. This approach will allow the Department to target the area where the need is greatest. Limiting the project to one area of the State should result in lower construction costs and will also simplify the construction management as the work will be confined to one District.

We request Commission approval to advertise for and select a Contractor to design and construct bridge replacements in District Four. The contract will be structured for an amount planned to be fifteen million dollars with the option to place as much as twenty million dollars under contract if the bid prices are favorable.

Prior to 2002, the South Carolina Department of Transportation had only received above ground utility information early in the project development process. Recently, as the Department has experienced numerous delays and complications during the construction phase due to utility conflicts, efforts have been made to identify methods for alleviating utility conflicts and allowing relocation of utilities early in the development process. In order to accomplish these goals, it is necessary for the Department to have as much information on underground utilities as early in the development process as possible. For these reasons, the Department needs to employ as on-call Subsurface Utility Engineering (SUE) consultant(s).

Accurate utility data from SUE firms can prevent construction delays, claims, and accidents. Early accurate utility data can also be used during the design phase to avoid major utility conflicts, plan for early relocations, and consequently save money. According to a study commissioned by the Federal Highway Administration (FHWA), States implementing some form of a SUE program have documented a savings of \$4.62 for every \$1 dollar spent on SUE. With the assistance of a SUE firm(s), the SCDOT will be able to better avoid utility conflicts by redesigning where possible, provide for early relocations of utilities, and save money in the process.

Each individual project will be evaluated for cost. No specific projects are identified at this time. However, it is anticipated that most medium to large projects will utilize SUE services as well as other projects statewide (interstate, bridge replacements, interchanges, etc.).

Funding for these services will be on a project by project basis and will be provided from the various federal and state project funds. We anticipate the total cost of all SUE and utility coordination services under this statewide contract to be approximately \$1.5 million per year.

Vulcan Materials owns the land on both sides of the old and new section of road. The new section will increase the road length by 0.16 miles. The existing road is a narrow substandard road with a moderate traffic volume. The new road will be 24 feet wide with 2 foot paved shoulders. There will be no cost to the Department for the construction of the road or the new right of way.

1. Abandonment of Relocated Section of Highway
2. Deletions and Removal of Roads from State Secondary System - Roads may be deleted and removed from secondary system by exchanging for equal or less mileage or roads, which have a higher traffic importance. Ownership reverts to local government having jurisdiction (city or county). Approval of deletion or removal by local government is not required.
3. Abandonment of Right-of-way - Right-of-way may be abandoned if it is determined that the right-of-way is not required for right-of-way proposes or if the right-of-way is not needed for Department purposes.
4. Court Order

Correction of Description of State Highways

The Department recommends Commission approval of the correction of the description of sections of State Highway previously added to the State Highway System. The description of roads currently in the State Highway Secondary System may be changed for relocation purposes, to revise the description of the termini to show what was actually constructed by contract, county line changes, or a change in the secondary road number.

Additions to State Highway Secondary System

The Department recommends Commission approval to add sections of road to the State Highway Secondary System for construction and maintenance. The Department may add roads to the State Highway Secondary System by request of the County Transportation Committees contingent on mileage being available under the current mileage cap. Roads may be added to the State Secondary System by the construction of a new roadway, accepting existing county/city roads into our Secondary System by the swap method, or by county line changes. Roads added to the State Highway System must be constructed to Department standards or reviewed for compliance with Department standards.

Rescind Action Adding Roads to State Highway Secondary System

The Department recommends the Commission rescind its previous actions adding roads to the State Highway Secondary System for construction and maintenance. The Department may rescind action on roads, which have not been constructed and formally accepted into the State Highway Secondary System. Roads may be rescinded due to right-of-way being unavailable, problems arising during construction, or funding issues.

Transfer of Road between Secondary and Primary Systems

The Department recommends Commission approval to transfer sections of road from the Secondary System to the Primary System, or vice versa. Pursuant to the provisions of Section 57-5-50 of the Code-of-Laws of South Carolina, 1976, the Commission may transfer any route or section of route from the state highway secondary system to the state highway primary system, or vice versa, when, in its judgment, such transfer is advisable to better serve the traveling public.

Detailed information concerning each of these requests is attached.
