Golden Eggs for Champ to Keep Carrier Inc in USA as promised

Dear Women Leaders on Cutting Edge of Power Tech, (most likely)

Sometime back I voiced my concern re Sec Steve Chu's for plan DOE gathering "spent" Nuclear fuel to transport and bury at Yucca Mountain in Nevada at the same time a 14 minute video played on France's Purex recycle plant where 78% of power is nuke and a goodly portion in load following reactors is used. Post OPEC embargo they were not to be caught with pants down again. Jimmy created DOE in response. Admired as first among our nation's engineers and a Christian in the image of Wilson I complained that Chu never even did an ROI on recycling fuel while we recycle glass, paper, plastic and tin cans in a four flow plant in CT and college grads are on food stamps. Honored by the oldest living president's reply it was he hope not to get reduced to ash before cooking eggs on pavement.

Point of this name dropping is the Eggs. Georgia Tech leads in large chillers, 2500 tn. I have a priority date on solar powered chillers for power plants early in 2014 and beat carrier/DOE effort I believe to the punch in my Desert Fox using resistance thermal heat exchangers for the hot stream input. If the Fox flies the market will be very big. Gov. Nikki it is easy for me to see why Carrier wants to pull out of Allied Industries in the overtaxed over regulated mess of CT tax and spend Democrats now in the red 2 billion on a budget of 14 B/year as Pfizer split and GE Top dogs did as well. Could you lure them to this sun belt with a Carolina or Bust Sign singing Ray Charles Georgia on my Mind. Bechtel at 40 billion/yr sells service. Fluor at 27 billion/yr same peanuts and just services.

Taint enough money for Trump's manufacturing jobs. PCT locked up equipment on Boats to Asia is Win Win like two Stolis for a Wild Turkey with that wicked Putin LOL

Scheming and Dreaming Respectfully, God bless!

Tom

Tom Young Ph D You do hail from Venus do you not, HAVC never killed folks and that is a good thing right??
