Ted,

Here is a brief description. Let me know if you need more detail….

Working closely with state agencies, DSIT will have the ability to intercede and interrupt, in real time, the download of detected viruses and malware to a specific network computer. DSIT will notify agencies of any potential attack and instruct the agency to remove the affected computer from the network. Agencies will then be able to take appropriate remediation action.

The hardware device is a Mandiant product that is currently in place at DSIT to help monitor and manage the DOR network. We would purchase this equipment and re-position the device here at DSIT to cover all the cabinet agencies.

The name of the device is the Mandiant Intelligent Response (MIR) appliance.

It cost $160,300. We are procuring this with DHS Homeland Security Grant money in partnership with SLED.

Jimmy,

Can you send me the information on the "hand" Marcia also talked about?

Thanks,
Ted

Attached are a few talking points and estimated costs to provide network monitoring.

Please let me know if you have any questions or need additional information.

Jimmy
