Dear Colleagues,

Dave Moody has informed me that he plans to retire from federal service in June after 36 years of performing a variety of challenging jobs for the Department of Energy. Dr. Moody's leadership at the Savannah River Site (SRS) over the last four years has resulted in tremendous achievements for the cleanup of the site. Here are some highlights of SRS achievements under Dr. Moody's leadership:

- Reduced site footprint by 75 percent;
- Permanently closed four radioactive liquid tanks;
- Maximized production of vitrified high-level waste canisters;
- Upgraded H-Canyon for continual mission;
- Found final disposition path for non-Moxable plutonium; and

- Spearheaded an effort to find an innovative and economic alternative to building a third Glass Waste Storage facility.

Please join me in thanking Dr. Moody for his service to the nation and congratulating him on his federal career. I am confident Dr. Moody will be equally successful in whatever challenges he chooses to tackle next.

Sincerely,

Mark Whitney
