## South Carolina State Parks

at 12:00:01 on 9/04/2018 UTC · 🌐

When walking along a trail, we don't often see beavers since they come out at night, but they leave more evidence than any other animal in our state parks. Be looking for these signs of beaver activity: a tree stump with a pointy top like a pencil, a dam stopping up water flow, a lodge made of sticks that are pointy at the ends, a slide area where beavers slide small trees and branches into the water, tracks. **Larry Reed** I was paddling with a friend on the Suwannee River near the Georgia border, when I mentioned that I thought I saw signs of beavers on some of the trees.

"You're crazy. There aren't any beavers around here" was the response. Not wishing an argument on such a fine day, I held my peace.

Just then, there was a noisy crashing high up on the riverbank, and here comes a furry ball rolling and bouncing down out-of-control into the water, as if God Himself had bowled it.

As we stared, a brown furry head popped-out of the water and two dark eyes glared at us indignantly, then a broad tail slapped on the water as it disappeared.

I guess I should have offered to make him a bet... 😊
