Is that litter in the woods? Not even close! Due to the recent cold morning temps, you can see "hair ice" or "ice flowers" in places! This frost occurrence happens during humid winter nights when the temperature drops just below the freezing point. The textures and forms are a result of the fungus *Exidiopsis effusa*. Have you ever seen this? Thanks to Ranger Dawn at Musgrove Mill for the pics and the info! [www.SouthCarolinaParks.com](http://www.SouthCarolinaParks.com)
