Re: GSK Voluntary Price Reporting

Dear Tony Keck,

This price report is a voluntary disclosure from GlaxoSmithKline ("GSK"), and is intended to assist State Medicaid Agencies by providing certain price information. GSK continues to evaluate its price reporting and disclosure process, and may from time to time add additional information to this report. The pricing information provided in this letter is, to the best of our knowledge, accurate and consistent with the regulations, provisions and requirements available at this time.

The data provided by GSK is confidential and may not be disclosed to any third party. This voluntary report to the States by GSK does not constitute an agreement by GSK to grant access of any further information pertaining to GSK's pricing.

#### **Direct Contracted Lowest Retail Price**

As we have previously informed you, GSK may, from time to time, introduce direct contracted discount programs for retail pharmacies.

Direct contracted retail customers are defined as customers where GSK has a direct contractual agreement with retail pharmacies, retail pharmacy networks, and/or wholesaler pharmacy buying groups that negotiate on behalf of independent pharmacies for the purchase of the product below through wholesalers/distributors at a discounted price. This definition does not include mail order pharmacies.

If retail program discounts exist within a given quarter, GSK as part of voluntary price reporting would disclose the lowest retail price offered to direct contracted retail customers. The lowest retail price is defined as the lowest price available from GSK during the rebate period, in the same quarter for which the AMP is computed. The lowest retail price calculation is performed at a product-family level. A product family is characterized by a 9-digit NDC and generally represents a single dosage form and strength for a drug, without regard to the package size.

Department of Health & Human Services  
OFFICE OF THE DIRECTOR

Confidential

Within the 4th Qtr 2011, GSK did not extend retail program discounts to direct contracted retail customers.

**Wholesale Acquisition Cost (WAC), Average Manufacturer Price (AMP) and Average Sales Price (ASP)**

In March 2010, GSK began reporting to State Medicaid Directors in each of the States the Quarterly Average Manufacturer Price (AMP). Enclosed is the most recent quarter (4th Qtr 2011) for all active AMP-eligible GSK pharmaceutical products listed in the attachment, as well as, the end of quarter Wholesaler Acquisition Cost (WAC) for those same products. In addition, GSK has begun including Average Sales Price (ASP) as of the 4th Qtr 2010. ASP has been reported only for those drugs that are reimbursed by Medicare Part B, unless excluded by the authorizing statute.

GSK reports these prices quarterly. GSK sends this information to the States approximately forty-five (45) days after the end of each calendar quarter. Additionally, GSK continues to report any other price information which any State currently receives from GSK subject to contractual or legislative requirement.

**a. Wholesale Acquisition Cost (WAC)**

For each prescription drug that it sells, GSK typically reports a WAC ("Wholesale Acquisition Cost") that is GSK's list price for the sale of its branded drugs to wholesalers and warehousing chains, not including prompt pay, stocking, or distribution allowances, or other discounts, rebates, or chargebacks. This list price does not represent prices charged to GSK customers, including retail and mail order pharmacies, as it does not include price and other concessions provided by GSK to its customers. WAC prices are provided at the package size.

**b. Average Manufacturer Price (AMP)**

Under Medicaid, sections 1927(a)(1) and (b)(1) of the Social Security Act ("the Act"), drug manufacturers enter into rebate agreements with the Secretary of the Department of Health and Human Services, and pay quarterly rebates to State Medicaid agencies pursuant to those agreements. Under these rebate agreements and pursuant to section 1927(b)(3) of the Act, GSK provides CMS with the AMP for each of its covered outpatient drugs on a monthly and quarterly basis, with the quarterly AMP figure for a product being derived as a weighted average of the AMP for each of the quarter's three months, and with submissions due 30 days after the close of each quarter. SSA § 1927(k)(1). Effective the fourth quarter 2010, pursuant to the Patient Protection and Affordable Care Act ("PPACA"), AMP is defined as the average price paid to the manufacturer for the product by (i) wholesalers for products distributed to retail community pharmacies and (ii) retail community pharmacies

that purchase drugs directly from the manufacturer. Where the drug is an inhalation, infusion, instilled, implanted, or injectable drug that is not generally dispensed through a retail community pharmacy, AMP also includes payments received from, and rebates or discounts provided to entities that do not conduct business as wholesalers or retail community pharmacies, such as pharmacy benefit managers, managed care organizations, insurers, hospitals, clinics, mail order pharmacies, long term care providers, and manufacturers. PPACA § 2503; H.R. 1586, 111th Cong. § 202 (2010). AMP is generally calculated as a weighted average of the AMPs for all package sizes of a drug and is reported for the lowest identifiable quantity of the drug (e.g., 1 milliliter, 1 tablet, 1 capsule). Manufacturers may restate the quarterly AMP for a product for a period of up to three years after the AMP figure originally was due. The data provided will include any restatements or other changes to AMP made by GSK and reported to CMS from the date of this report (4th Qtr 2011). GSK may periodically make changes to its systems, methodologies, standard operating procedures and policies to reflect its then current understanding of CMS's requirements, and therefore its method for calculating AMP may change over time. Healthcare reform legislation has changed the definition of AMP effective 4th quarter 2010.

### c. Average Sales Price (ASP)

Pursuant to the Average Sales Price ("ASP") reporting requirements provided in the Medicare Prescription Drug Improvement and Modernization Act of 2003 ("MMA"). The following are the authority and guidance documents currently available for use in creating an Average Sales Price ("ASP") calculation methodology (i) the authorizing statute, 42 U.S.C. § 1395w-3 ("MMA"), (ii) a interim final rule to implement that statute, found at 69 Federal Register 17935 (April 6, 2004), (iii) statements made by CMS representatives at an Open Door Session, held on April 20, 2004, (iv) a final rule to implement the statute, found at 69 Federal Register 55763 (September 16, 2004), (v) updates to Appendix A sent via e-mail by CMS dated May 26, 2006, a CMS sponsored conference call on June 2, 2006 and updates posted on CMS' website, (vi) a final rule revising certain provisions to implement the statute effective on January 1, 2007, found at 71 Federal Register 69623 (December 1, 2006), (vii) a final rule revising certain provisions to implement the statute effective on January 1, 2008, found at 72 Federal Register 66221 (November 27, 2007) and, (viii) the ASP Reporting Requirements Questions and Answers published on the CMS website. As stated by CMS during the Open Door Session and in the Questions and Answers, where guidance is lacking under governing law, manufacturers may make reasonable assumptions that are consistent with their business practices, and also may look to the Medicaid Drug Rebate Program for direction as well. Together, these guidance documents form the basis for GlaxoSmithKline's ("GSK") ASP calculation methodology.

Confidential

Commercial drug price reporting services, such as First DataBank and "Redbook," typically report "AWPs" (Average Wholesale Price) for GSK's drugs, which those services determine by multiplying GSK's reported WACs by what is usually a standard "mark-up" of either 1.2 or 1.25. The AWPs reported for GSK's products by these services do not generally represent (and are higher than) the prices at which GSK drugs are purchased by retail providers and other GSK contracted customers. GSK has provided the units per package size (UPPS) as a reference for any analysis of AMP or low price information that may require conversion of pricing between units and packages.

If you have any questions regarding the discount programs described in this letter, the WAC, AMP or ASP information provided as an attachment to this letter or require additional information from GSK please contact: Ted Worrell, Director, Operational Compliance 215-751-7233 or email [Edward.c.worrell@GSK.com](mailto:Edward.c.worrell@GSK.com)

Sincerely,

*Ted Worrell*
