Is that litter in the woods? Not even close! Due to the recent cold morning temps, you can see "hair ice" or "ice flowers" in places! This frost occurrence happens during humid winter nights when the temperature drops just below the freezing point. The textures and forms are a result of the fungus *Exidiopsis effusa*. Have you ever seen this? Thanks to Ranger Dawn at Musgrove Mill for the pics and the info! www.SouthCarolinaParks.com

Charles N Patty Sizemore Beautiful never in my 76 years! Never seen them before.

Dawn Watson Weaver Hi, Mark! The battle at Musgrove occurred in 1780! And the hair ice wasn't on the battlefield, but in a different area of the park.

at 16:32:00 on 12/02/2018 UTC

Dawn Watson Weaver Amy, the trails here are all doable and all really beautiful. We also do ranger guided hikes regularly. And we love to hear about what you want to see and do on a hike.

at 22:06:56 on 9/18/2019 UTC

Patricia Tanner Candal Sally Tran It's not a fungus. It's ice crystals that form on a very cold night (here below 28) around the base of some plants, white Virginia Crownbeard where I live near a swamp. Water spews up through the roots and splits the stem (like a water hose with a crack). As the water spews out, it forms very interesting shapes. It thaws in morning sun.
