TIDBIT! Oyster Reef Restoration is a process where we take old oyster shells and recycle them back into the ecosystem. The oysters are then bagged and placed into the marsh by volunteers. This provides a hard substrate for new baby oysters (spat) to grow. Over time a new reef will form, stabilizing the shore and preventing erosion. To learn more about oyster reef restoration in SC, visit <http://score.dnr.sc.gov/>.

Clara Davis Ford Taryn Jason Arion, thought you might be interested in this.
