Detect, react.

Edge Lights turn any target into a hit reactive target!

[Learn More](#)

Whether shooting at a Commercial Range or in your back forty, Edge Lights by MotoShot will turn any target into an immediate feedback, hit reactive target. [visit website »](#)

The Edge Light is a hit sensing system that lights up an ultra-bright micro LED Light when your target has been hit.

Visual feedback for steel targets

Edge Light can be added to just about any type of target to provide immediate visual feedback and shot confirmation.

[learn more »](#)

Night Vision Training

Edge Lights are available with infrared LED's for immediate shot confirmation on steel, paper or plastic targets during NVG weapons training.

[watch video »](#)

Force-on-Force Training

Edge Lights provide visual shot confirmation for a operator or camera during force-on-force simulation training.

C-Bell Steel Targets Performs Better, Rings Louder

C-Bell Targets are made from the highest quality AR Steel. C-Bell Targets are free of bolts or brackets leaving a smooth shooting surface.

Conventional flat steel targets "ping" dissipates almost immediately while the C-Bell "ping" rings on for several seconds.
