Subject: MICROSOFT SURFACE 3 8.1 OS TABLET -

I wanted to share some exciting news regarding a future project launch– Verizon Wireless will be carrying the Microsoft Surface 3 tablet targeted for Late August. With so many government accounts looking at Virtual Desktop Initiatives (VDI) and seamless integration with their existing internal applications. Take a look at the details below and please feel free to contact me with any questions.

Microsoft has announced that Verizon Wireless will carry the Surface 3 with the embedded 4G XLTE chipset. Baseline specs are as follows:

- **Screen Size: 10.8 in**
- **Operating System: Windows 8.1 Pro 64-bit Edition (upgradable to Windows 10)**
- **CPU Type: Atom x7 - (latest, next generation Atom processor)**

The biggest differences between what we will have in our DCs compared to what Microsoft sells (WiFi only) are specs and processing speeds. The Surface Pro 3 comes with a larger screen (12inch) and usually comes with a beefier CPU type.. Core i3, i5 or i7 processor.

Other important things to know:

- Verizon Wireless will carry and sell this tablet directly in our inventory so we can sell this to our customers
- We will carry multiple accessories (Stylist Pen, Backlight keyboard, etc)
- T-Mobile is the only other carrier thus far that has made an announcement that they will be carrying the tablet
