Description/Significant Features: Road 1306.14 (unnamed logging road) dates from circa 1915 and connects Roads 1306.01 and 1306.05, extending 0.78 mile northwest/southeast through the northeastern portion of the project tract (see Figures 3.21 and 3.22). Road 1306.14 averages 20 ft wide, 30 ft amsl elevation, and its surface is an aggregate of dirt and gravel. For most of its course, the roadbed is at ground level. The southern 745 ft of Road 1306.14 between Roads 1306 and 1306.05 is unimproved and used primarily as an ATV trail.

Alterations (include date(s), if known)

Architect(s)/Builder(s):

Historical Information

Historical Information: These investigations identified 14 roads associated with Watson Hill's logging era, circa 1925-2006. These include seven historic roads (Roads 1306.08-1306.14) and seven non-historic roads (Roads A-G). These roads were developed by logging enterprises in the early to mid-twentieth century to facilitate silvicultural activities at Watson Hill.

The earliest map or plat to show Road 1306.14 is Gaillard's (1919) plat of the CMMC phosphate mine (see Figure 3.17). Though its configuration may have changed slightly through the years, USGS (1957, 1959, 1973, 1980) aeriels and topographic maps show Road 1306.14 integrated into the logging road network.

Source of Information: Gaillard 1919; USGS 1957, 1973, 1980
