(early care and learning in south carolina)

Early childhood education in South Carolina includes a diverse collection of families, early care and education programs, and schools where children have the opportunity to begin a lifelong love of learning. Early learning experiences impact later academic success. Yet, the early learning experiences that children encounter vary significantly. Early care and learning settings are fragmented in South Carolina as they have a variety of funding streams, mandates, and standards by which they are measured.

(defining and measuring school readiness)

A statewide definition of school readiness that is connected

“When South Carolina measures school readiness statewide and uses that data to continually improve early care and learning experiences for young children, we will systematically get children ready for school and ensure that they succeed once they get there.”

to early learning and K-12 standards, and that early care and learning stakeholders agree upon, is essential to unifying the diverse early care and learning system. Legislation introduced in the 2013-2014 Session of the General Assembly provides a definition of school readiness and requires the adoption of a description of school readiness.¹

To begin to put this conceptual definition and common language into action, several states are working on a specific type of school readiness measure, the kindergarten entry assessment. Kindergarten is the first point in which virtually all children in South Carolina are located in a single setting. Kindergarten entry assessments are used to look backward—as a tool to improve programs to promote school readiness and to look forward—to ensure that children continue to grow and learn once they enter school.² When South

“We need a standardized statewide definition of school readiness and an assessment tool that can be used with every child, whether they are in private or public kindergarten or none at all.”

– Charles Patrick
Board Chair, Trident United Way

Carolina measures school readiness statewide and uses that data to continually improve experiences for young children, we will prepare children for school and ensure they succeed once they get there.

WHY USE A KINDERGARTEN ENTRY ASSESSMENT?

- To **BETTER UNDERSTAND** and address achievement gaps earlier in children’s development.³
- To **SUMMARIZE** the experiences children had prior to entering school.⁴
- To **SERVE AS A BASELINE** for kindergarten instruction and for measuring future progress.⁵
- To help **PROVIDE INFORMATION** about young children who move among schools or from one district to another.
- To **IMPROVE INSTRUCTION** and **ENHANCE LEARNING** in kindergarten at the individual level.
- To **DETERMINE THE EXTENT** to which children at the aggregate level are ready for school and identify populations that need additional intervention.⁶
- To help the state and local communities determine what **POLICIES AND PRACTICES** are impacting school readiness.

(essential considerations for a kindergarten entry assessment)

- Ongoing training, quality assurance mechanisms, and continual evaluation are essential to implement and sustain a statewide kindergarten entry assessment.
- There is national consensus in early education that assessments should not be used to determine whether children should be held back from kindergarten.⁷
- Kindergarten entry assessments should also not be used as the sole indicator of early childhood program performance.
- Statewide kindergarten entry assessments alone do not provide a complete picture of how to continually improve early care and learning opportunities for children.

- An assessment must be linked to the standards being taught in kindergarten.
- Nationally, the trend is to assess all entering kindergarteners rather than using a random sample of students. The approach of using a random sample significantly limits the usefulness of a kindergarten entry assessment for teachers and parents. However using a random sample of students makes the assessment significantly less expensive to administer.
- Kindergarten entry assessment data are most useful when the data are reported at the state level and connected with other data about similarly situated children.

(domains that are commonly included in a kindergarten entry assessment)

- Language and literacy development;
- Cognition and general knowledge (early mathematics and scientific development);
- Approaches to learning;
- Physical well-being and motor development, including adaptive skills; and
- Social and emotional development

NEXT STEPS

- **CONVENE** a stakeholders group to finalize a kindergarten readiness description.
- **IDENTIFY** assessments that are aligned with the state’s definition of school readiness and provide data necessary to understand children’s progress in key domains.
- **PILOT TEST** multiple kindergarten entry assessments to gain feedback

The Institute for Child Success is a non-profit, non-partisan research and policy organization that fosters public and private partnerships to align and improve resources for the success of young children in South Carolina. A partnership of the Children's Hospital of the Greenville Health System and the United Way of Greenville County, ICS supports service providers, policy makers, and advocates focused on early childhood development, healthcare, and education to build a sustainable system that ensures the success of all children, pre-natal through age five.
