Subject: Reduce Costs With Grasshopper MaxTorque Clean Diesel.

[View in Browser](#)

Grasshopper MaxTorque™ clean diesel mowers deliver the power, fuel efficiency and productivity you need while minimizing emissions, giving you a cost-effective way to meet your emissions goals without sacrificing performance.

A low-emission, expertly engineered diesel engine is half the equation. Grasshopper builds a frame around it that channels the power into a quiet performing, low-vibration torque monster with nimble handling characteristics. Grasshopper MaxTorque™ clean diesel mowers provide the riding comfort, quality of cut and low-maintenance design that are cornerstones of the Grasshopper product line.

Because diesel delivers more power than other alternative fuels — up to 50% more power drop for drop — work can be performed efficiently with less fuel consumption. As a result, Grasshopper MaxTorque™ diesel mowers complete jobs up to 50% faster than like-powered propane models while saving up to 900 gallons of fuel over 1,000 hours of use. That translates to a savings of about \$6,000 in fuel costs per unit over three years of operation.

That's great news for fleet operators, who can see those savings multiply with every Grasshopper MaxTorque™ clean diesel mower they add to their fleet. With rising fuel prices and stricter air quality standards, it's easy to see how these powerful and economical diesel mowers can help significantly reduce operating costs while still providing powerful and environmentally friendly performance for the most demanding applications.
