Subject: new Forbes post on energy-related deaths

Hi folks,

Energy-related deaths make for some interesting philosophical discussion!

Jim

Forget Eagle Deaths, Wind Turbines Kill Humans

If human life is worth \$129,000 per year, and coal kills 15,000 people a year in the U.S., that means the industry gets about \$37 billion in death tax credits per year. Wind's death subsidy is only a few million dollars and nuclear doesn't any of this particular subsidy.
