Subject: Tropical Storm Cristobal

Good Morning,

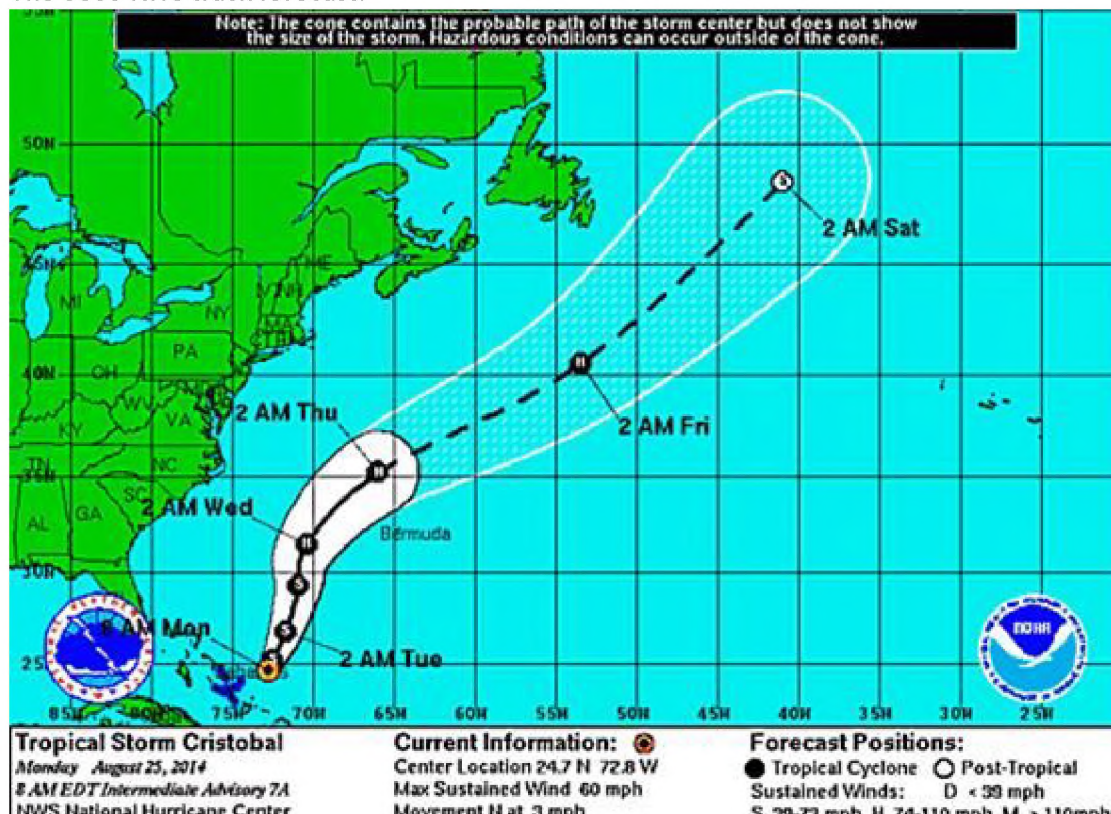

Tropical Storm Cristobal is 725 miles southeast of sunny Beaufort (the SC flavor) with 50 mph winds. The storm is drifting north at a staggering 3 mph, and that may be a tad generous given the weak upper air steering. For all practical purposes Cristobal is steering itself via the Beta effect (You may press the I believe button here...). This slow motion fly-by to the southeast will continue today, with the track becoming more northeasterly towards France tomorrow. Conditions are improving, albeit slowly, for continued, if not restrained intensification into a hurricane by

Wednesday. The official NHC track takes Cristobal within a perilous 500 miles of Myrtle Beach on Wednesday. I suspect Cristobal will pass farther to the east.

This morning satellite image shows the cool, very dry air in place of the Southeast that will prevent any untoward, threatening westward storm movement as that espoused by the gloomerdoomer conspirists of the Tin Foil Hat Society. Fishstorm.

The 0800 NHC track forecast:

Mark Malsick

Severe Weather Liaison
South Carolina Department of Natural Resources
State Climate Office
