

THE GOVERNOR
THE CAPITOL
COLUMBIA, N.C.

GOVERNOR,

We heard the news in California about the overabundant water over there. We in California were thinking we ~~want~~ want water, we'd like to have it and we'd like to say "send it over!"

Well that's absurd! But what about connecting city, county, state and Federal storm drains.

Easy work for the Army Corps of engineers and they get paid to do that kind of thing; what's ~~difficult~~ difficult is making high rises.

Easy work for union carpenters and union craftsmen generally — they go to night school three nights a week, three hours a night.

for four years &
I'd led the federal
department of national
disasters would be
glad to consider mak-
ing or saving money
serving your state.

We have a man made
canal in California that
goes from north to south
— The north had too
much water. The south
had too little. The
canal can be connected
to anywhere along the
way by any city or state.
Wind mills can pump
water ~~up~~ up hill, vacume
pressure can pull some
of that water up hill.

Dams stop and save water;
canals and storm drains
can divert water.

Sincerely,
Joseph Medrano, a carpenter
