South Carolina State Parks

at 19:00:42 on 6/24/2021 UTC

Folks, have you noticed these “ghostly” flowers sticking up through the leaves throughout Caesars Head or Jones Gap state parks? Ghost Pipes, *Monotropa uniflora*, are flowering plants that do not contain chlorophyll. Instead of making their food through the process of photosynthesis, they have a mutualistic relationship with fungi that free nutrients for the plant’s use. How cool is that?

Martine Mégevand Zimmer Yes we have!

Dawn Watson Weaver This was on the battlefield at Battle of Musgrove Mill State Historic Site in the fall. Later season plants have a different pigment. This is *monotropa hypopithys*, which is a related plant, sometimes called 'pinesap'.
