Subject: Fw: Setting South Carolina on an economic recovery Path for Clean Mother Earth Friendly Products.

On Wednesday, June 8, 2011 12:49 PM, Ricky Loftin <ricky.loftin@yahoo.com> wrote:

Governor Haley, I respect you for listening to the Young Girl on the Collards recommendation to be our Leafy Vegetable for the State of South Carolina. You did take the time and effort to listen and make a judgment on the creative impression on her thoughts. A choice like that sets a good example for future correspondence from School Age Children with hopes and desires to communicate with Political Personnel! Great that you took the time.....

Governor Haley, I, Ricky Loftin, has taken the time and effort to hand deliver information to your office concerning COMMERCIAL HEMP PRODUCTION which would bring BILLIONS OF NEW DOLLARS into our economy but never heard a word from anyone in your office. This information was back up with Government Studies and magazine articles concerning the many usages of Hemp that would take the poisons out of the products we use today; plus, make them cheaper with less pollution! The FACTS are layed out in these articles and everyday the reality of Commercial Hemp Production becoming a major Factor in Products in United States is growing. California has just passed a Bill that will allow their Citizens to compete with Canada, Romania and Hungary in keeping the \$500 Million in imported Hemp at home so America Citizens can grow and manufacture the most EARTH FRIENDLY products. Yes! Canada is gearing up to send \$1 Billion Dollars in Hemp to

United States in 2013! The bottom of this letter will be the many Countries that now have Commercial Hemp Production growing today. South Carolina has many closed Factories that could be reopened with Commercial Hemp Production. Our growing season would be eight months; where Canada only has four.....South Africa has six! All of our Elderly, Medical, Schools, Port and new train development could be paid for with Commercial Hemp Production new money. Proterra Electric Bus could follow Kestrel Electric Car from Canada and be all Hemp Produced.....Hemp is better and stronger than Fiberglass: Mercedes Benz, Ford and Lotus are now using Hemp instead of Fiberglass! Give our Citizens a chance to be leaders in a field where South Carolina would grow and manufacture these Earth Friendly products. Let's be economically sound and show the World what true COMMON SENSE, INSIGHT & IMAGINATION TOO leadership can accomplish! Thanks!
