Description/Significant Features: Road 1306.06 is an unnamed road associated with Charleston Mining and Manufacturing Co.; extends 1.0 mile between Roads 1306.02 and 1306.12 through the north-central portion of the project tract (see Figures 3.21 and 3.22). Road 1306.06 is a dirt road that averages 15 ft wide and 20-30 ft amsl elevation. For most of its course, the roadbed is at ground level, except in wetlands where it is raised two to three ft above ground surface. Ditches flank both sides of the raised roadbed where it extends through the remnants of hand- and mechanically-excavated phosphate mines associated with Resource 1324 and rice fields associated with Resource 1320.

Alterations (include date(s), if known)

Historical Information

Historical Information: These investigations identified three historic roads (1306.05-1306.07) from Watson Hill's phosphate era, circa 1866-1924. These roads linked the former Charleston Mining and Manufacturing Co. and Gregg phosphate mining operations on the Ashley River with mines on the project tract. It is likely these phosphate mining operations utilized extant infrastructure such as Roads 1306 and 1306.04. In turn, twentieth century silvicultural enterprises adapted Roads 1306.05-1306.07 as part of their infrastructure.

Although no maps show Road 1306.06, it is assumed to be from the phosphate era because it is oriented parallel to other CMMC tram lines (Resource 1324.01). USGS (1957, 1973) aeriels indicate Road 1306.06 integrated into the logging road network.
