Thanks for Opposing More Nuclear Waste or Plutonium to Savannah River Site

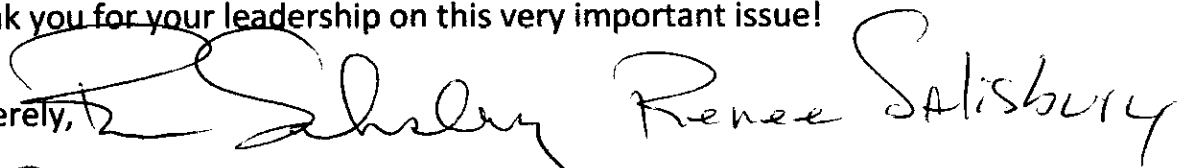

As a resident of South Carolina, I want to thank you for taking a strong stand against the U.S. Department of Energy's plan to bring more nuclear waste or plutonium to the DOE's Savannah River Site (SRS) in South Carolina.

Plans are afoot to bring in plutonium from around the world, liquid high-level nuclear waste from Canada and highly radioactive commercial spent nuclear fuel from Germany. Other nuclear-import plans may be secretly lurking under the guise of nuclear non-proliferation.

Enough is enough! The Savannah River Site must not be a dump for the world's radioactive waste. While the clean-up of Cold War waste must continue, the future of SRS must not be based on the processing and storage of imported nuclear waste. A future based on environmentally sound projects must be pursued by SRS.

In addition, I urge you to push for the termination of the badly mismanaged plutonium fuel (MOX) project at SRS. Years behind schedule, construction of the MOX plant is billions of dollars over budget and is not financially or technically viable and is a waste of taxpayers' money. MOX has resulted in 13 metric tons of plutonium being stranded at SRS and more would come in if this project continues. Given the nuclear non-proliferation risks of plutonium, plans should be immediately deployed to manage plutonium as nuclear waste and not a product to be introduced into commerce.

Thank you for your leadership on this very important issue!

Sincerely,  Shelley Renee Salisbury
