RE: Automate manual processes, reduce labor and costs by 40%

Dear Ivy,

We are pleased to introduce you to Invent^{SM}, a progressive inventory solution. SGX Health brings you technology that automates and simplifies your inventory processes allowing you to focus on what matters most.

As a healthcare administrator, you regularly face challenges with your inventory. They include substantial spikes in labor cost, manual data entry processes that are tedious and inaccurate, the inability to audit or track progress to completion, and shortage of resources being pulled from their day to day activities. All the while, the pressure is on to complete an inventory valuation at lightning fast speeds.

Invent^{SM} uses the iPad mini, to collect inventory and upload information to our Business Intelligence Portal where it is matched to user item files. Invent^{SM} gives you:

- A rich set of reports, graphs, charts and analytics that feed into your MMIS
- New visibility into your supplies and their locations
- Immediate results - as soon as a count closes, you will have an instant valuation
- The ability to compare assets across all cost centers
- Reduced inventory count processing times
- A much happier materials management team!

Visit our website now to sign up to see a product tour of Invent^{SM}: www.sgxhealth.com/demo. Learn how your inventory can be pain-free, accurate and easier than ever before!

Sincerely,

Lauren Saxton
