**South Carolina State Parks**

at 12:00:01 on 8/09/2016 UTC · 🌐

TIDBIT! Joseph Lord, a founding member of the town of Dorchester, was interested in learning more about his new South Carolina home. In 1704, he sent pressed plant samples to a friend in England to help identify the local plants he found. Today, over 100 samples sent by Lord are part of a plant collection at the Natural History Museum in London. One sample, the *pyrrhopappus carolinianus* aka the Carolina desert-chicory or the false dandelion is common throughout South Carolina. Have you spotted one in a state park this summer?
