**Subject:** Request a Free 30-Minute Mobility Connectivity Consultation

**Hi Nikki,**

Sierra Wireless is a leading provider of mobile communications and networking equipment for public safety and has deployed more than 2,000,000 routers and gateways worldwide. We specialize in vehicle-based communications that support multiple devices and applications in a multi-network environment. Vehicles are tied to the corporate network, allowing for information to be managed in a secure reliable way. Officers get all information in real time.

Would you be interested in signing your agency up for a free 30-minute mobility connectivity consultation? This is a brief awareness opportunity to discuss any challenges or questions you may have relating to wireless internet connectivity in your public safety vehicles. You're welcome to invite anyone within your team to attend. This is a no pressure consultation on some of the best connectivity solutions available for the public safety market.

Some frequently asked questions:

- What are my options for a more reliable connectivity solution in our vehicles?
- How do I work more closely with the carriers on connectivity issues?
- Why am I experiencing connectivity issues?
- Are their solutions that allow me to use multiple carriers for best coverage?
- What is the difference between consumer and industrial grade routers and gateways? And why is that important when used inside a vehicle?
- How do ensure I have coverage for my devices when I am away from the vehicle (like in a ditch, etc)?
- Are there offerings that include cellular connectivity and fleet management with GPS and online tools?

Thanks,  
Todd
