**kenkyl** @crbarefoot false TTs or nah? 🤔  
at 12:28:51 on 10/16/2017 UTC

**joshbenser** @kenkyl how do you tell? There are false ones?  
at 12:33:36 on 10/16/2017 UTC

**kenkyl** @joshbenser best to check the underside. Appears porous if real, false will look smoother  
at 13:31:17 on 10/16/2017 UTC

**joshbenser** @kenkyl ah- cool. Thanks. Any recommendations for best mushroom resources?  
at 13:33:35 on 10/16/2017 UTC

**crbarefoot** @joshbenser yes, @kenkyl hit the nail on the head. Turkey tails are polypores while false turkey tails are crust fungi so will have no pores on the underside. False (*Stereum ostrea*) does tend to be red more often than *Tremetes versicolor*, though.
