We couldn't have been more excited to help kick off The Original Six's new after school program today in Jonesville!! The program encourages students to learn through hands on activities-- learning new technology skills based in science, technology, engineering , and mathematics; through visits from guest mentors; and field trips in the state. Most importantly they will receive help with their homework so they can feel organized and ready for school every day. They are a bright group of students, ready to learn, and we can't wait to watch them succeed!
