Tourism can be an important driver in a local economy. In many communities in South Carolina, it is a major economic force; in fact, tourism is frequently touted as one of the state's largest industries. One benefit from tourism is that it brings a net inflow of spending into a region, similar to exports.

For this webinar, Dr. Rob Carey, Director of the Regional Economic Analysis Laboratory at the Strom Thurmond Institute at Clemson University, will discuss how REMI PI+ was used to estimate the impact that tourism spending has on Beaufort County, South Carolina. Data for the model were obtained through a survey of visitors to Beaufort County conducted by partner institution the University of South Carolina Beaufort. Spending reported in the survey was adjusted to reflect the estimated number of actual visitors to the county in 2015, then input to the REMI model. REMI output was then used to estimate fiscal impacts on local governments within the county, including the impact on accommodations and hospitality tax revenue.

Finally, you will have a chance to engage in Q&A after the presentation.

This presentation will be approximately one hour in length, and we offer it at no charge via the Citrix GotoWebinar web conferencing platform. Advanced registration is required; please click on the link in the sidebar to register online.

At REMI, we are inspired by a single goal: to inform and improve the quality of public policy decisions. That's why we are dedicated to understanding how government actions and other changes affect the world around us. Our belief is that improved knowledge and information will lead to better decisions. We work to develop and support the use of economic models that inform government and corporate decisions.
