Office of the Governor
1205 Pendleton Street
Columbia, South Carolina 29201

The Honorable Nikki R. Haley,

I want to congratulate you on your tireless efforts in bringing new businesses into the State of South Carolina. I had read about the various tire manufacturing plants that have relocated in the State as well as the Volvo and Mercedes auto industries and having BMW expand its facilities.

What impressed me the most, however, was the growth of Boeing in Charleston. I could not believe how many facilities were and are being built as I drove by from the Charleston International Airport to see my parents in Pawleys Island for Christmas. Boeing always impressed me as a young man because my grandfather who worked on the F-15 for General Electric / BAE was my inspiration.

I know that technology plays a significant role in all the businesses that you are encouraging to build or relocate in the State of South Carolina. I also know that during a recent newsbroadcast, you mentioned that "the State of South Carolina has thousands of technology jobs that need to be filled".

I am currently working on a technology team at the David Glass Technology Center at Walmart Home Office if Bentonville, Arkansas. I would like to return to South Carolina someday to work but I am not familiar with the technology positions available and open in businesses or government.

From my attached resume, you can see that I have a strong interest in technology and would appreciate if someone on your staff would review my resume and email me some suggestions on which businesses or government jobs in the State of South Carolina are currently hiring or will be hiring for positions related to cyber security. My resume is also on Linkedin.

It sounds like it is "A Great Day (Year) in South Carolina" and I will be anxious to hear from your office about potential technology jobs.

Sincerely,

Christopher M. Fedor
