Hi Nikki,

Mission-critical mobile workers who spend most of their time on the road or in temporary offices, operate in a wide range of industries – law enforcement, emergency medical services, fire departments, utilities, field service, disaster relief, news and entertainment – but they all have one thing in common: they need seamless, reliable mobile connectivity.

To make the selection process easier, we've put together a list of the most important questions to ask when deploying a network of mobile gateways.

1. Is it rugged enough?

2. Does is support all onboard devices?

3. Does is support the right WAN connections?

4. Is the core platform future-proof?

5. Is it secure?

6. Is there redundancy, in case of emergency?

7. Does it support GPS?

8. What is the power source?

9. How do you manage the mobile network?

10. Can I get help with all this?
