**Subject:** Free White Paper from Sierra Wireless: Asset Management for Public Safety

**Hi Nikki,**

Many systems exist in the market to track assets in vehicles, improving operational efficiency and providing audit trails for tracing lost or stolen property. However, the public safety environment is more demanding than the commercial one, because the assets have tactical value, which makes information about them not only time critical but life-critical. It is not acceptable to find out that an ambulance left for a shift without its' defibrillator only when the paramedic opens the storage cabinet to treat a heart attack victim. Knowing where and when the police officer left his patrol car, and whether or not he took his assault rifle with him is not enough. You need to know it NOW so that backup support can be dispatched even if the officer is prevented from calling in on his voice radio.

[This White Paper](#) explains why the OMG Mobile Gateway and OMM Management System provide an ideal platform for tracking public safety assets.

Thanks,  
Todd
