Mosquito Control Is Mission Critical

Get it done with Integrated Mosquito Management

According to the World Health Organization, vector-borne diseases account for more than 17% of all infectious diseases, causing more than 1 million deaths annually. Of all disease-transmitting insects, the mosquito is the greatest menace.

The key to a successful control program requires an integrated approach that includes surveillance of breeding sites and the early use of larvicides for prevention as well as the use of adulticides to address problem adult mosquito populations. Central Life Sciences, the makers of Altosid® larvicide – one of the most trusted larvicides in the industry – carries an entire lineup of mosquito control products that professionals can use to build an integrated mosquito management (IMM) program.

IMM is designed to attack mosquitoes at each stage of their life cycle. No two mosquito habitats are alike – and neither are the ways that you treat them. The mosquito products from Central Life Sciences provide the performance you need in both easy-to-access and difficult-to-treat areas. So you're ensured consistent control – and peace of mind.

Central Life Sciences mosquito control products include:

Altosid® Larvicides:

Unlike conventional pesticides, each Altosid® larvicide formulation contains (S)-methoprene, an insect growth regulator (IGR) that stops mosquitoes from becoming breeding, biting adults.

FourStar® Microbials:

A larvicide that kills mosquito larvae before they become adults by using the naturally occurring bacteria *Bacillus sphaericus* (Bsph) and *Bacillus thuringiensis israelensis* (Bti).

Zenivex® Adulticides:

Oil-based formulations for use in Ultra Low Volume (ULV) applications that provide quick, permanent knockdown and reliable control of adult mosquito populations in any mosquito habitat.

To learn more about these, and all the mosquito control products from Central Life Sciences visit CentralMoquitoControl.com.
