Subject: Voters Concerned about Ethanol, Poll Finds

October 31, 2018

## Voters Concerned about Ethanol, Poll Finds

Dear Kevin,

Brand new polling shows voters are worried about the impact of higher ethanol blends like E15:

- 79 percent are concerned about expanded E15 sales and vehicle incompatibility
- 83 percent are concerned that consumers could shoulder higher pump prices if service stations are forced to invest in new infrastructure to accommodate certain types of fuels
- Nearly 70 percent are worried about mistakenly using E15 and causing damage to their engines

Consumer concerns are justified. Nearly 3 out of every 4 vehicles on the road today are not designed for E15 gasoline. Extensive testing shows higher-ethanol fuels like E15 can damage engines and fuel systems, and a number of automakers have even said that [using E15](#) could void car warranties.

That's why the Trump administration should reconsider its move to push more E15 ethanol into gas tanks. Better yet, let's reform the Renewable Fuel Standard (RFS) – a relic of past energy scarcity that forces increasing amounts of ethanol into the nation's fuel supply, [regardless of market demand](#).

Reform is well overdue, and there's bipartisan support in Congress for action. It's time to fix the RFS before consumer concerns become reality.

Sincerely,

**Mike Sommers**

## U.S. Energy Up, Emissions Down

Thanks to technologies and innovations associated with developing energy from shale and other tight-rock formations and deep-water regions, the U.S. is the world's leading natural gas and oil producer and refiner. Just as remarkable is the fact the United States' world leadership in energy production is accompanied by world leadership in cutting greenhouse gas emissions.
