Subject: Tropical Depresssion 2

Yesterday, upon closer inspection by the Air Force recon flight, 91L was upgraded to a tropical depression, known as TD 2, presently 270 miles SE of Charleston tracking NW at 13 mph. A tropical storm warning remains in effect along our entire coast.

Forecast:

TD has a very brief window to attain tropical storm status as it passes over the Gulf Stream tonight; 45 mph tops, which is not considered likely.

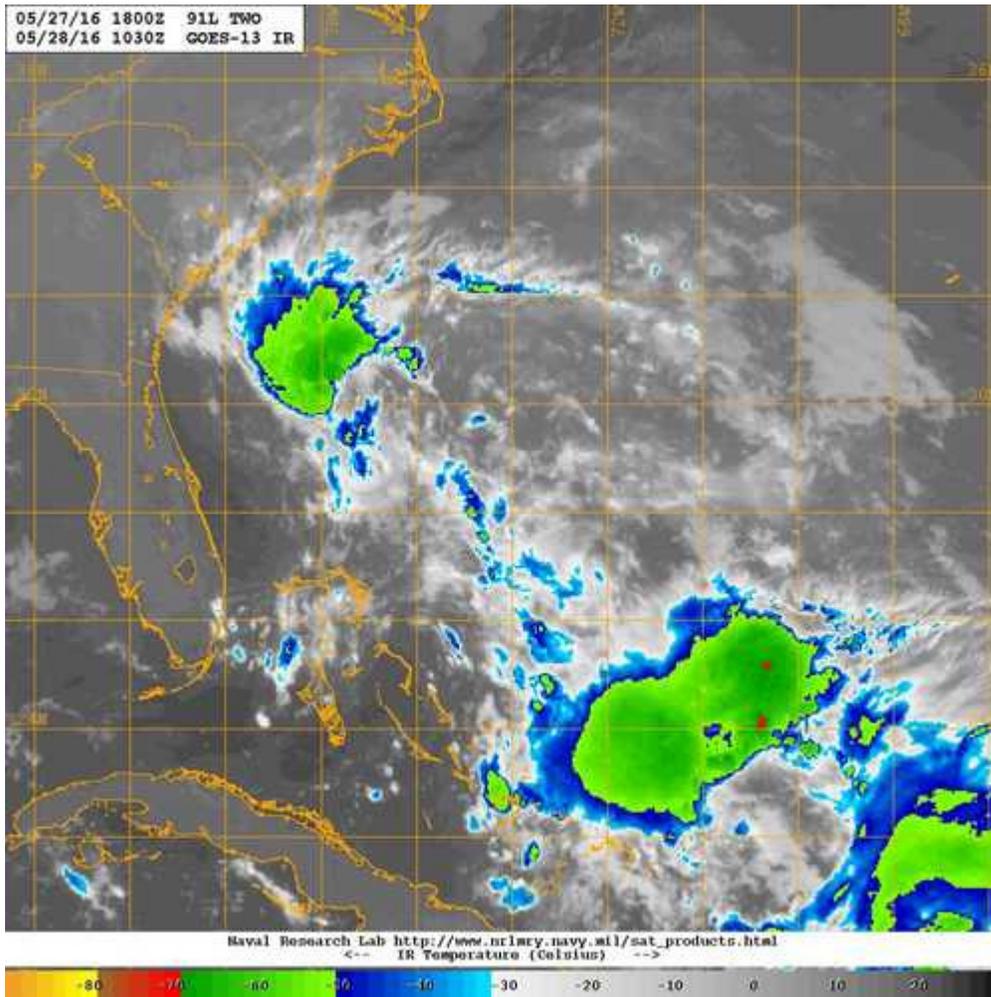

Effects on SC:

TD 2 is expected to scrape along the beach Sunday and Monday bringing 2-4 inches of rain and gusty 20-30 mph winds. SC has summer thunderstorms worse than this TD. Most likely threats include localized flooding and power outages, neither of which would normally require any state assistance.

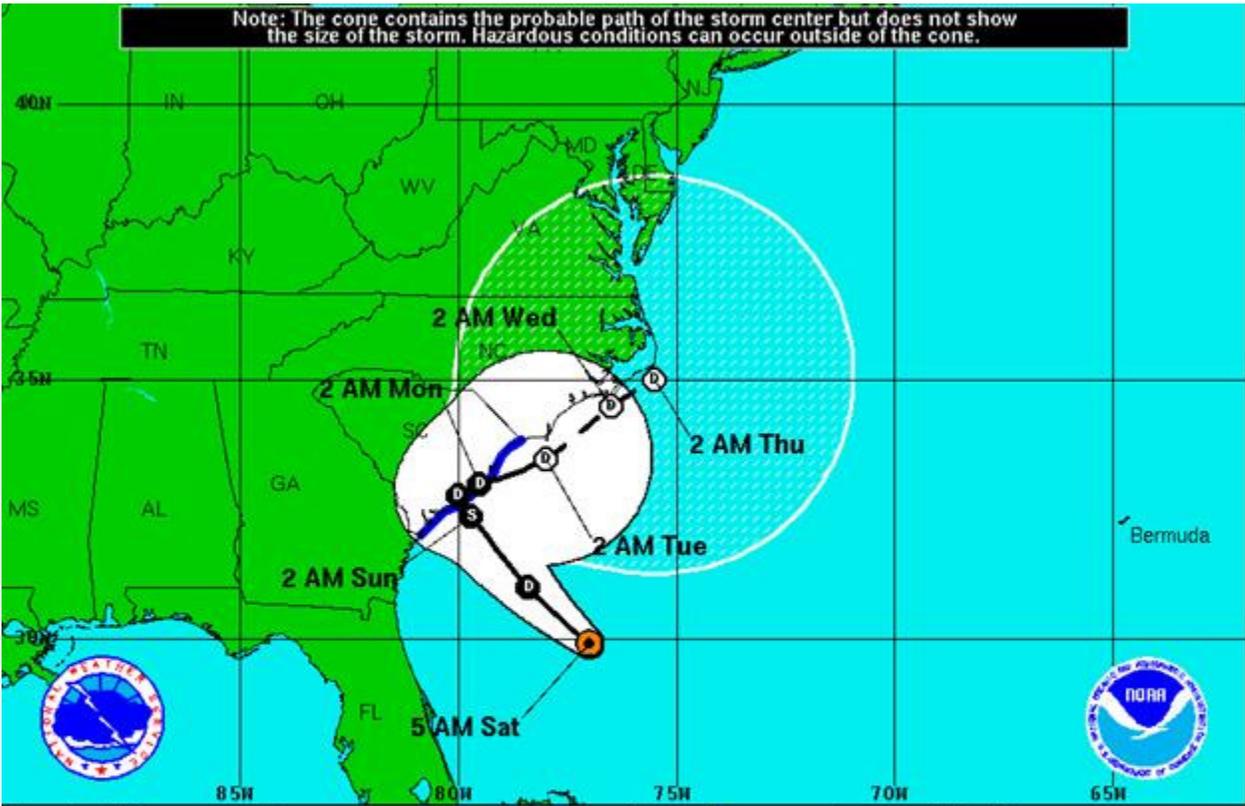

Counties:

EMD will check again this morning but it is unlikely that coastal counties will be changing operational conditions or planning any specific actions other than keeping their EOC staffs informed.

05/27/16 1800Z 91L TWO
05/28/16 1030Z GOES-13 IR

Note: The cone contains the probable path of the storm center but does not show the size of the storm. Hazardous conditions can occur outside of the cone.

Tropical Depression Two

Saturday May 28, 2016
 5 AM EDT Advisory 3
