Subject: Muslim Inbreeding - Something to think about ...

Subject: Muslim Inbreeding - Something to think about ...

This may provide insight into of the "mentality" that is so foreign to our way of thinking, although it clearly doesn't excuse it! If you search on "do Muslims marry first cousins," all responses confirm this and that Muslim religion/culture actually encourages it! This is interesting and may help explain what is happening around the world today.

As the author (Dr. Nicolai Sennels) correctly points out, if Islam is allowed to continue expanding and taking over countries (as is now happening in Europe), the whole gene pool will be seriously damaged and mankind will degrade as a result. But most importantly, it explains their mad, murderous fanaticism which we just cannot understand.

Dr. Nicolai Sennels is a Danish psychologist who has done extensive research into a little-known problem in the Muslim world: the disastrous results of Muslim inbreeding brought about by the marriage of first-cousins.

This **practice**, which has been prohibited in the Judeo-Christian tradition since the days of Moses, was sanctioned by Muhammad and has been going on now for 50 generations (1,400 years) in the Muslim world.

This practice of inbreeding will never go away in the Muslim world, since Muhammad is the ultimate example and authority on all matters, including marriage.

The massive inbreeding in Muslim culture may well have done virtually irreversible damage to the Muslim gene pool, including extensive damage to its

intelligence, sanity, and health.

According to Sennels, close to half of all Muslims in the world are **inbred**.

In Pakistan , the numbers approach 70%.

Even in England, more than half of Pakistani immigrants are married to their first cousins.

In Denmark the number of inbred Pakistani immigrants is around 40%.

The numbers are equally devastating in other important Muslim countries:

67% in Saudi Arabia ;

64% in Jordan ;

63% in Sudan ;

60% in Iraq ;

54% in the United Arab Emirates and Qatar

According to the BBC, this Muslim-inspired **inbreeding** is thought to explain the probability that a British Pakistani family is more than 13 X's as likely to have children with recessive **genetic disorders**.

While Pakistanis are responsible for 3% of the births in the UK , they account for **33% of children with genetic birth defects**.

The risk of what are called autosomal recessive disorders such as cystic fibrosis and spinal muscular atrophy is 18 times higher and the risk of death due to malformations is 10 times higher.

Other negative consequences of **inbreeding** include a 100% increase in the risk of stillbirths and a 50% increase in the possibility that a child will die during labour.

Lowered **intellectual** capacity is another devastating consequence of Muslim marriage patterns.

According to Dr. Sennels, research shows that children of **consanguineous marriages** lose 10-16 points off their IQ and that social abilities develop much slower in inbred babies.

The risk of having an IQ lower than 70, the official demarcation for being classified as "**retarded**", increases by an astonishing 400% among children of cousin marriages.

(Similar effects were seen in the Pharaonic dynasties in ancient Egypt and in the British royal family, where inbreeding was the norm for a significant period of time.)

In Denmark, non-Western immigrants are more than **300%** more likely to fail the intelligence test required for entrance into the Danish army.

Dr. Sennels says that ***"the ability to enjoy and produce knowledge and abstract thinking is simply lower in the Islamic world."***

He points out that the Arab world translates just 330 books every year, about 20% of what Greece alone does.
