Subject: Stop Ebola, Stop Silver Discrimination! Petition for Redress

I am writing at the suggestion of the Natural Solutions Foundation, [www.NaturalSolutionsFoundation.com](http://www.NaturalSolutionsFoundation.com), to support my right to truthful speech and expressive association as defined in the First Amendment of the US Constitution.

Natural Solutions Foundation and its Trustees have received a Warning Letter from FDA and FTC because they have shared truthful information about Nano Silver 10 PPM, shown to support normal cell membrane integrity even in the presence of the Ebola virus, in "in vitro" research performed under the US government's Defense Threat Reduction Agency (DTRA) and declassified in 2009.

Further, they have urged that people use Nano Silver 10 PPM for its immune support properties, established by more than 1000 peer reviewed studies. FDA maintains that such information automatically turns a nutrient into an untested drug (and therefore illegal to sell, manufacture or recommend in the US) effectively muzzling truthful speech about natural options for health, including Nano Silver 10 PPM

This could not come at a more inappropriate moment since the World Health Organization stated on August 12, 2014 that it is a "moral duty" to try any potential Ebola cure or treatment, even if it has never been tested in humans, to end the epidemic in West Africa and keep it from spreading around the globe.

In keeping with that, Natural Solutions Foundation has urged, and supported, clinical demonstrations of this nutrient in the Ebola region and suggested that it be used for its immune support by everyone in the population since its safety record is admirable.

In addition to supporting truthful speech about nutrients, and urging your support of natural options for normal structure and function like Nano Silver 10 PPM, I urge you to no longer require false and misleading disclaimers on nutrients and in speech pertaining to nutrients, as mandated in the Statutory Disclaimer (Dietary Supplement Health and Education Act - DSHEA). FDA is, in effect, requiring people to lie about nutrient impact since nutrients DO cure some conditions, do prevent some conditions, do mitigate some conditions and most certainly do treat some conditions.

I look forward to learning that FDA is, in fact, honoring the First Amendment of the United States Constitution by rescinding these prohibitions against truthful speech and requirements for untruthful speech.

I join in the intent of the Citizens Petition filed with FDA on October 7, 2014; Comment Tracking No. 1jy-8esp-h668 in FDA Docket No. FDA-2013-S-0610-0001 at [www.Regulations.gov](http://www.Regulations.gov)
