The P3 Water Summit Returns This April To San Diego

Join more than 600 public and industry leaders, project owners, and utility representatives for two days dedicated to water project delivery. If you're planning your next procurement and want to better understand how alternative delivery can be used for your upcoming water, wastewater, and stormwater projects, you'll want to attend.

The P3 Water Summit invites industry and local, state, and Federal water representatives for P3 education and incredible networking opportunities.

Discover new project opportunities and find solutions for your community. Register today and save \$400.

The 2019 Program: 30+ P3 Sessions, Plant Tours, Workshops, Networking, and More

The 2019 program will explore how different forms of partnerships and financing mechanisms are being used to deliver water projects of all sizes.

The agenda examines current trends in water project delivery and will include:

- New approaches to stormwater system development
- Community benefits and innovative life cycle asset management approaches
- Solutions for deferred O&M in your system
- Operating cost management best practices
- Grant and loan assistance programs for projects and how to qualify
- Setting standards and performance metrics in partnerships
- How to score, select, and negotiate with prospective partners
- Sustainability and resiliency planning
- Green infrastructure development
- Solutions for rural communities and smaller projects
- Federal programs available to assist your next project, and ways to work with State Revolving Funds, and develop hybrid public/private financing
- Case studies of large and small P3 projects

Also in the program will be workshops, panels, and seminars developed with EPA, State Water Resource Control Boards, State Infrastructure Banks, and USDA.

More than 100 public water operators and industry practitioners will share their experiences, discuss water projects currently in the market, and detail structures and best practices used in developing, building, and maintaining water, wastewater, and stormwater systems.

Who's Attends?

The P3 Water Summit brings together local, state, and federal water officials evaluating the use of P3's with industry, contractors, P3 practitioners, planning experts, and owners to discuss project opportunities and methods to promote investment in U.S. infrastructure.

Attendees seeking to better understand the development and operation of the P3 model will benefit from experts and other project owners sharing their knowledge, and valuable insights into market trends crucial for business decisions.

Public attendees include utility operators, system managers, public works directors, state and local water authority administrators; EPA, BLM, USDA, and Army Corps of Engineers representatives; county supervisors, city managers, resiliency officers, and representatives of municipal water systems of all sizes.

Private sector attendees include senior professionals from utilities, water service, engineering, construction, law, design, development, banking, and consulting firms.

Public and private summit attendees benefit from incredible networking opportunities, build relationships with project owners, share best practices, learn current trends in system management, and discover new methods to address challenges in their water systems.
