

Recommendation

The Committee recommends that high school course requirements for admission to public colleges and universities be amended so as to delete the one half unit of economics and one half unit of government and to increase from one to two units the additional social studies requirement with the statement that those units include "at least one unit in social studies; half units in economics and government are strongly recommended for the second unit."

We recommend that the applied physics course entitled "Principles of Technology" not be approved as a course to meet the physics option in the laboratory science prerequisite.
